## CGI Interface Introduction

CGI listed in this file which is provided by ip camera, is one set of interface based on HTTP protocol, and the client application (it can be the webpage run on web browsers or other applications). You can make various operations on the device by this CGI.

- Cgi authentication: to access below cgi need authentication. Different cgi port need different authority: visitor,operator and admin. Authority is depend on the device setting. The Specify authentication support two way:the basic security authentication on http protocol , attached user name and password directly on cgi parameter.
- Way to visit cgi: on all the http way,all the cgi only support get and post, and upgrade.cgi and restore.cgi only support post way.

Get Example

```
<form name="form2" method="get" action="cgi-bin/hi3510/cleanlog.cgi">
    <input name="cururl" type="hidden" >
    <input name="name" type="hidden" value="access">
</form>
```

Post例子:

```
<form name="form5" method="post" target="retframe" enctype="multipart/form-data" action="cgi-
    bin/hi3510/upgrade.cgi" onSubmit="return upgrade()">
    <td colspan="3"><input type="file" name="setting_file" >
    <input type="submit" value=" submit" >
</form>
```

- Cgi Return:according to different return info , cgi can divide into two way:

- ✓ Get cgi of device status and Parameter. If success, will return txt which include device status or parameter, specify format as javascript,define every status or parameter as a variable and return,as:

```
var bps_1="2048";
var fps_1="25";
var gop_1="50";
var brmode_1="1";
var imagegrade_1="1";
var width_1="704";
var height_1="576";
```

if get failed will return as:"[Error]Get video attribution error! errcode is 0xa10e6008".

- ✓ Set device parameter or cgi, the cgi will return txt include operate result,if success will Return"HTTP/1.0 200 OK",if failed will return the spec wrong info,as :"[Error][Data-Length:91] unrecognized or incomplete command line." means cgi parameter have mistake.

- ✓ Cgi can directly input on browser and test,For Example:
